

Original Software

THEIR CHALLENGE

Continuous competitive improvements by **implementing new efficiencies** throughout the business.

A lack of test and project management software was making **test auditing** and progress **reporting difficult**.

Visibility, traceability, and efficiency of testing were key goals, while the main driver was the **'1ERP4All'** project to **centralize 15 countries** on to a single S4/HANA environment.

THE SOLUTION

Having already rolled out **S4/HANA** to Greece, Titan's next step is to incorporate other countries.

Original Software understood their **complex processes** and provided a customized solution to meet their **specific requirements**.

THE JOURNEY

Titan are at the **beginning** of their journey and look forward to enhancing their **visibility, traceability and efficiency of testing** using the tools provided by Original Software.

This could lead to **Qualify** being used as the Test Management Platform for all Enterprise IT Testing.

WHY ORIGINAL SOFTWARE

Key criteria: **ease of use** for users, integral support for **SAP**, a global **support network** and **cost effectiveness!**

Stavros Elliniadis, Group IT Business Applications Director

"The decision was made based on **versatility, platform capabilities, and ease of configuration**. This was despite the runner-up having a presence in Greece and being a service provider for another part of our existing IT infrastructure."
